

# Wastewater Lagoon

## Insect Control

Controls larvae of mosquitoes, black flies, and nuisance aquatic midges before they become a problem.

### LARVE CONTROL

Stops insects at the source

### ENVIRONMENTALLY RESPONSIBLE

Protects the ecosystem and prevents spread in the community.

### INDUSTRIAL SOLUTIONS

Built for demanding applications

## Aqua BAC

Biological Larvicide / Midge Fly, Black Fly and Mosquito Control

Wastewater lagoons and retention ponds can turn into perfect breeding sites for midge flies and other bothersome insects if not properly managed.

In industrial treatment environments, large insect populations can create housekeeping concerns, interfere with work areas, and contribute to unsanitary conditions around the site.

EBS offers proven, environmentally responsible larvicidal solutions to tackle this prevalent issue.

Controls larvae of mosquitoes, black flies, and nuisance aquatic midges *before* they become flying adults

A highly targeted, EPA-registered larvicide based on *Bacillus thuringiensis subspecies israelensis*, Strain BMP 144

Ideal for wastewater lagoons, stormwater ponds, ditches, catch basins, and industrial process water systems

Safe for people, wildlife, fish, and beneficial insects when used as directed

Sold as dry or liquid product based on application requirements

An Employee-Owned Company  
Comprehensive Wastewater Solutions
